### Investment Objective

The Aurora Fortitude Absolute Return Fund (**Fund**) seeks to achieve absolute returns and income through the use of several different investment strategies. The focus on absolute returns differs from traditional funds in that the Fund aims to produce positive returns regardless of equity market conditions or global market indices.

### Investment Strategy

The Fund seeks to take advantage of market mispricing and arbitrage opportunities using a diverse range of investment strategies. The Responsible Entity of the Fund researches various criteria for each investment, including fundamental and quantitative analysis, company event situations such as takeovers and mergers, earnings announcements, demergers and restructuring, liquidity events, recapitalisations, multiple share classes, option availability and pricing.

The Fund will invest in opportunities that are considered to offer attractive risk return characteristics with a focus on potential catalysts that seek to generate a profitable return regardless of the market direction. The Fund may use derivatives for risk management as well as to create new positions and may opportunistically short sell securities that may be overpriced or to reduce risk on the overall portfolio.

**Fund performance summary**

- The Fund returned -3.07% for the month against its benchmark return of +0.12%, whilst the broader S&P/ASX200 Index returned -2.75%.
- The key contributor to performance this month was the Fund's investment in Molopo Energy Limited (ASX:MPO), which ticked up 3.57% for the month (on light volume) prior to MPO requesting a voluntary suspension in relation to the finalising of terms for a strategic investment. The Responsible Entity of the Fund notes that, since this time, MPO has announced that the strategic investment would not be proceeding, and currently MPO remains suspended. The Responsible Entity of the Fund notes further that the investment in MPO by the Fund is currently subject to uncertainty resulting from applications by the Australian Securities and Investments Commission and MPO to the Takeovers Panel, which are yet to be finalised. Aurora encourages investors to read its previous ASX announcements in relation to the calculation of the current net asset value of units in the Aurora Global Income Trust and the Aurora Absolute Return Fund for further information in this regard.
- The key detractors from performance this month were long dated call options over ASX-listed investment companies, with the implied value of these options falling as the underlying exposures declined during May. These falls were partially offset by derivative positions held to provide portfolio downside protection. Other detractors included 8lp Emerging Companies Limited (ASX:8EC) which fell -3% during the month after reporting poor performance on its underlying investments, and RNY Property Trust (ASX:RNY) which traded down on light volume.
- The Fund incurred extraordinary costs during the month in relation the Takeovers Panel proceedings in respect of MPO.
