Investment Objective

The Aurora Global Income Trust ("Fund") seeks to achieve absolute returns and income through the use of several different global investment strategies. The focus on absolute returns differs from traditional funds in that the Fund aims to produce returns not correlated with market conditions or global market indices.

Investment Strategy

The Fund seeks to take advantage of market mispricing and arbitrage opportunities using a diverse range of investment strategies. The Investment Manager of the Fund researches various criteria for each investment, including fundamental and quantitative analysis, company event situations such as takeovers and mergers, earnings announcements, demergers and restructuring, liquidity events, recapitalisations, multiple share classes, option availability and pricing. The Fund will invest in opportunities that are considered to offer attractive risk return characteristics with a focus on potential catalysts that seek to generate a profitable return regardless of the market direction. The Fund may use derivatives for risk management as well as to create new positions and may opportunistically short sell securities that may be overpriced or to reduce risk on the overall portfolio.
